

HD 25.2 **BENCH-TOP TURBIDITY METER**

The HD25.2 is a digital turbidity meter for laboratory and mobile use, suitable for measurements in drinking water, waste water and process liquids. The working principle is based on the nephelometric (90° scattered light sensor) method.

It is equipped with three light detectors and two LED light sources (white and infrared) which are permanently kept under control in order to guarantee long-term stability. The instrument performs measurements according to the standards EPA 180.1, ISO-NEPH (ISO 7027), EBC and ASBC. It is also able to carry out measures of transmission factor percentage of white and infrared light.

The initial factory calibration is based on Formazin primary standard. For routine calibration a set of stabilized secondary standard solutions is available: STCAL (Turbidity standards for calibration):

- · STCAL 1 less than 0,05 NTU
- · STCAL 2 equal to 8 NTU
- · STCAL 3 equal to 80 NTU
- · STCAL 4 equal to 800 NTU

User Calibration is automatic on one or four points, depending on the measuring variable. Stabilized power supply and advanced electronics guarantees optimal performances over time.

The HD25.2 is a **datalogger** that stores up to 999 samples.

The data can be transferred from the instrument connected to a PC via the RS232C and USB 2.0 serial ports.

The RS232C serial port can be used to transfer the acquired measurements to a 24 column printer (i.e. HD40.1)

The Print function allows to print labels with progressive and automatically incrementing numeration, with all data related to the sample being examined. The dedicated software DeltaLog11 allows instrument management and data processing on PC.

The use of the HD25.2 by more users is facilitated by the "User Management" function, which allows, according to the case, to enable or disable some advanced functions of the instrument through password. The protection degree is IP66.

Ordering codes

HD 25.2: The kit is composed of: instrument HD25.2, 4 empty cells, 4 calibration standards STCAL, 3 1.5Vdc alkaline batteries, lubricant rag, 25cc Silicon oil, instructions manual, carrying case and software DeltaLog11 for PCs running Windows operating systems.

Accessories

9CPRS232: Connection cable SubD female 9- pole for serial output RS232C
CP22: Connection cable USB 2.0 connector type A - type B
SWD10: Stabilized power supply at 230Vac/9Vdc-300mA mains voltage.
HD40.1: 24-column portable thermal printer, serial interface, 57mm paper width, four NiMH 1.2V rechargeable batteries, SWD10 power supply, instruction manual, 5 thermal paper rolls. Requires the cable 9CPRS232 (optional).
PL: Lubricant rag
OS1: Silicon oil - 25cc.

KCV: 4 empty sample cells Ø24x68mm

Turbidity calibration standards

STCAL 1: Calibration standard with low turbidity Formazin reference less than 0,05 NTU.

STCAL 2: Calibration standard with Formazin reference 8 NTU - 20cc.

- STCAL 3: Calibration standard with Formazin reference 80 NTU 20cc.
- STCAL 4: Calibration standard with Formazin reference 800 NTU 20cc.
- KS: Kit 4 calibration standard with Formazin reference STCAL 1, STCAL 2, STCAL 3, STCAL 4.

- ASHE 25.0 RSbE
