

## Flow Transmitter RRI

- Uncomplicated measurement of flow rates
- No magnets; uses inductive sensor
- Long working life thanks to high quality ceramic axis and special plastic bearing
- Run-in and run-out sections are not necessary.
- Modular construction with various connection systems
- Plug-in and rotatable connections
- Output signal PNP or NPN
- Intrinsically safe behaviour
- Optionally, non-return valve, filter, constant flow rate device in the connections

### Characteristics

The flow meter consists of a spinner which is rotated by the flowing medium. The rotor's rotational speed is proportional to the flow volume per unit time. The rotor is fitted with stainless steel clamps (optionally titanium). An inductive proximity switch records the rotational speed, which is proportional to the flow rate.

### Technical data

<b>Sensor</b>	inductive	
<b>Nominal width</b>	DN 10 (RRI-010) DN 25 (RRI-025)	
<b>Mechanical Connection</b>	female thread G 3/8, G 1 male thread G 3/8 A, G 1 A hose nozzle Ø11, Ø30 (other threaded, crimped, and plug-in connections, connections with constant flow rate device or limiters available on request)	
<b>Pressure resistance</b>	PN 16 bar	
<b>Medium temperature</b>	0..60 °C	
<b>Materials medium-contact</b>	Housing	PPS, PVDF (Fortron 1140L4)
	Rotor	PVDF
	Clamps	1.4310 optionally: titanium
	Bearing	Iglidur X
	Axis	ceramic ZrO <sub>2</sub> -TZP
	Seal	FKM

<b>Materials, non-medium-contact</b>	PVC cable, 1.4305, 1.4301, CW614N nickelled	
<b>Current consumption at rest</b>	10 mA / NAMUR max. 7 mA	
<b>Output current max.</b>	200 mA / NAMUR max. 7 mA	
<b>Electrical connection Sensor</b>	cable 2 m or for round plug connector M12x1, 4-pole	
<b>Resistant to short circuits</b>	yes	
<b>Reversal polarity protected</b>	yes	
<b>Ingress protection</b>	IP 67	
<b>Weight</b>	RRI-010	approx. 0.2 kg
	RRI-025	approx. 0.5 kg
<b>Conformity</b>	CE	

- (1) Complete metering range
- (2) Specific metering range
- (3) Start-up range
- (4) Extended operating range, increased wear,  $D_p > 0.5$  bar
- (5) Pulses / litre (details on label)
- (6) Average pulses / litre
- (7) Tolerance  $\pm 3\%$  of the measured value
- (8) Scatter  $\pm 10\%$  of the pulses / litre value (5) in the batch
- (9) Reproducibility ( $\pm 1\%$  of the full scale value) is the repeat accuracy of a frequency, relative to l/min
- (10) Max. frequency, related to the relevant metering range up to approx. 0.5 bar pressure drop across the flow meter

Types	Q <sub>max</sub> l/min H <sub>2</sub> O	Metering range			pulses / litre	frequency Hz EW
		(1)	(2)	(3)		
010...020	1.8	0.1.. 1.5	0.5.. 1.5	0.1..0.5	10200	255

## Handling and operation

The Rototron device is installed in the pipework with the aid of the rotatable adapter pieces. If necessary, the adapters can be removed from the body of the housing after the stainless steel clips have been removed from the housing. Before reinstalling, it should be ensured that both the adapter with the O-ring and the sealing surface in the body are clean and undamaged. The adapters should be fitted carefully in the housing (it is best to turn them), so that the O-ring is not damaged.

With this flow sensor, there is no need for run-in and run-out sections. However, it should be ensured that the flow sensor is at all times filled with medium. Any preferred installation position is possible, but the best possible venting position should be chosen (rotor axis horizontal, flow horizontal or from bottom to top). Air bubbles affect the measurement results. For filling processes,

the valve should be installed behind the sensor. A running up time of approx. 0.5 seconds and a running down time of approx. 3 seconds should be noted.
